Press the Start Machine button below.
Start Machine
Start the AttackBox by pressing the Start AttackBox button at the top of this page. The AttackBox machine will start in Split-Screen view. If it is not visible, use the blue Show Split View button at the top of the page.
Scan and learn what exploit this machine is vulnerable to. Please note that this machine does not respond to ping (ICMP) and may take a few minutes to boot up. This room is not meant to be a boot2root CTF, rather, this is an educational series for complete beginners. Professionals will likely get very little out of this room beyond basic practice as the process here is meant to be beginner-focused.

Task 1 Recon
Task 2 Gain Access
Exploit the machine and gain a foothold.
Answer the questions below
Start Metasploit
No answer needed
Complete
Hint
Find the exploitation code we will run against the machine. What is the full path of the code? (Ex: exploit/.....)
_____/_____/____/_____
Submit
Hint
Show options and set the one required value. What is the name of this value? (All caps for submission)
_____
Submit
Hint
Usually it would be fine to run this exploit as is; however, for the sake of learning, you should do one more thing before exploiting the target. Enter the following command and press enter:
set payload windows/x64/shell/reverse_tcp
With that done, run the exploit!
No answer needed
Complete
Hint

Hint
Confirm that the exploit has run correctly. You may have to press enter for the DOS shell to appear. Background this shell (CTRL + Z). If this failed, you may have to reboot the target VM. Try running it again before a reboot of the target.
